

Insuring the

safety

of food

Insuring safe and healthy food for consumers is vital for public health. Evaluating, preventing and controlling chemical, biological and microbiological risks throughout the food chain are part of INRA's priorities.

To do so, INRA relies on its in-depth knowledge of production and processing conditions in all sectors and looks for methodological innovations for new approaches.

Risk benefit **Risks and consumer choices** Toxicity
Xenobiotics Chemical contaminants **Hygiene** Bioavailability
